

Jordan & Jordan Unveils Market Data Reporting (MDR) Managed Service

New York, NY - March 9, 2015 -- Jordan & Jordan announces the launch of the Market Data Reporting (MDR) managed service which provides clients a fully automated system for exchange, vendor and custom reporting. Responding to client needs, J&J piloted MDR last year to help clients implement savings and cost avoidance strategies including Multiple Installation for Single User (MISU), direct exchange reporting and roles based exemptions.

Tom Etheridge, Managing Director of Market Data at J&J, said, "Combining our best of breed technology, operational processes and data licensing and compliance expertise, MDR is the complete reporting solution."

MDR is designed to eliminate errors in the reporting process through use of automation and implementation of operational best practices such as use of run books, maker/checker and post mortem processes. The MDR system currently automates exchange, vendor and customer reports. The MDR system implements an easy to use web-based user interface allowing customers to view and approve reports for submission on-line. J&J also offers a range of value added services with MDR designed to mitigate audit risk. J&J has attorneys on staff to assist with interpreting licensing agreements. MDR clients include hedge funds, technology providers and global investment banks. Contact us today for a demonstration of MDR functionality.
